

Täringvara Sõnade Nimekiri

20 tahulisele täringule.

Täringvara abil on võimalik luua turvalisi ja kergelt meeldejäävaid salafraase. Selle jaoks on vajalik vähemalt ühte kahekümnetahulist täringut. Kasutada võib ka mitut täringut, et veeretamiste arvu vähendada. Kui Täringuid saadaval ei ole, siis võib ka kasutada selleks virtuaalseid täringuid või juhuarvu generaatorit. See aga ei ole soovitatav.

Esmalt tuleb otsustada, mitmest sõnast peaks salafraas koosnema. Soovitatav oleks kasutada kuuesõnalist salafraasi igapäevasteks tegevusteks. Kriitilisemates kohtades on ka soovituslik kasutada seitset või rohkemat sõna. Täringvara salafraaside turvalisusest on võimalik lähemalt lugeda www.täringvara.ee.

Salafraasi ühe sõna leidmiseks tuleb täringut veeretada 3 korda. Saadud täringu silmade järgi on võimalik nimekirjast otsida vastav sõna. Näiteks kui veeretada täringu numbrid 7, 7 ja 13, on salafraasi esimeseks sõnaks 'kumbki'. Kuna nimekiri on koostatud kuuetaahulisele täringule, ei ole kõik täringuveeretuse kombinatsioonid seotud sõnaga. Sellisel juhul tuleb täringut uuesti veeretada. Tegevust tuleb korrata, kuni salafraasis on kokku soovitud arv sõnu. Salafraasi sõnad tuleb eraldada üksteisest tühikuga. Vajadusel võib kasutada ka teisi kirjavahemärke.

NB! Sõnu ei tohi omavahel kokku liita ilma kirjavahemärkideta.

Näide

Oletame, et meil on vaja 6 sõnalist salafraasi. Selle jaoks on vaja 6 korda 3 ehk 18 täringuveeretust. Oletame, et täringuveeretused olid järgnevad:

6, 17, 20, 2, 16, 14, 1, 2, 19, 7, 7, 13, 7, 18, 14

Kolmestes gruppides oleks see

6, 17, 20 2, 16, 14 1, 2, 19 7, 7, 13 7, 18, 14

Otsides nimekirjast välja nendele numbritele vastavad sõnad saame salafraasiks

koonal eesti aedik kumbki las umbri
